

Maths Curriculum- Grade 6

QUARTER	TOPICS
QUARTER 1	<p>Number Sense and Operations: Understanding and applying the properties of operations with whole numbers, fractions, and decimals Performing operations with multi-digit whole numbers and decimals Solving word problems involving operations with numbers</p> <p>Ratios and Proportional Relationships: Understanding ratios and using them to solve problems Finding equivalent ratios Solving proportions</p> <p>Expressions and Equations: Evaluating and simplifying expressions with variables Solving one-step and multi-step equations with rational coefficients Understanding the concept of variables and their use in mathematical expressions and equations</p>
QUARTER 2	<p>Geometry: Classifying and measuring angles Understanding and applying the properties of triangles and quadrilaterals Determining the volume of rectangular prisms and other three-dimensional shapes</p> <p>Statistics and Probability: Representing and interpreting data using measures of central tendency and variability Constructing and interpreting various types of graphs and charts Understanding and calculating probabilities</p> <p>Number System: Understanding and applying the properties of operations with integers Dividing multi-digit numbers and decimals Finding the greatest common factor and least common multiple of two or more numbers</p>
QUARTER 3	<p>Ratios and Proportional Relationships: Understanding and using rates and unit rates Solving problems involving scale drawings and similar figures Interpreting and analyzing proportional relationships in various contexts</p> <p>Expressions and Equations: Writing, evaluating, and simplifying algebraic expressions Solving real-world problems involving equations and inequalities Representing and analyzing relationships using tables, graphs, and equations</p> <p>Statistics and Probability: Analyzing and interpreting data sets Calculating probabilities and making predictions Conducting statistical experiments and simulations</p>
QUARTER 4	<p>Geometry: Understanding and applying the concept of surface area and volume Identifying and classifying polygons and circles Applying transformations (translations, reflections, rotations) to shapes</p> <p>Data Analysis and Probability: Summarizing and representing data using various statistical measures Making inferences and drawing conclusions based on data Understanding basic concepts of probability and calculating probabilities in different scenarios</p> <p>Problem Solving and Reasoning: Applying problem-solving strategies to a variety of mathematical situations Using critical thinking skills to solve complex problems Communicating mathematical reasoning and justifying solutions</p>
